

LUKA ADZIC

(267) 701-3590 ▪ lukaadz@wharton.upenn.edu ▪ 4035 Spruce St ▪ Philadelphia, PA 19104 ▪ [LinkedIn](#) ▪ [GitHub](#) ▪ [Portfolio](#)

EDUCATION

University of Pennsylvania, The Wharton School
Bachelor of Science in Economics, Finance Major

August 2024 - May 2028
GPA: 3.69/4.00

EXPERIENCE

University of Sydney – Sydney, Australia
Quantitative Researcher

May 2025 – August 2025

- Built financial models analyzing equity market dynamics across 26+ S&P 500 companies, improving identification of speculative price bubbles by applying econometric and time-series analysis in Python and MATLAB
- Conducted capital markets and investment research on historical equity price movements (1996–2023), generating statistical signals used to evaluate market valuation anomalies and risk indicators.
- Increased robustness of quantitative investment analysis frameworks by testing rolling-window models across multiple time horizons to identify shifts in market sentiment and volatility.

LEADERSHIP

Maritime@Penn – Philadelphia, PA
Founder & President

September 2024 – Present

- Founded University of Pennsylvania's first maritime club, growing membership to 100+ students and 1,000+ followers on socials
- Created six committees to execute projects in maritime finance, engineering, law, logistics, and innovation.
- Organized 15+ speaker events featuring executives from the world's largest maritime due diligence company and Top 100 Most Influential Maritime Professionals, connecting students to mentorship opportunities, internships, and industry experience

PROJECTS

Interactive Financial Bubble Detection Dashboard
Python, MATLAB, Plotly, Next.js

July 2025 – August 2025

- Developed an interactive financial risk visualization dashboard using Next.js, React.js, TypeScript, and Plotly, analyzing 26+ S&P 500 equities and indices.
- Integrated Python (NumPy, Pandas) and MATLAB statistical models for time-series analysis, options market data (put/call ratios), and volatility estimation across rolling windows (1996–2023).
- Deployed on Vercel with responsive design, multi-asset comparison, and date filtering for institutional-style risk monitoring and portfolio management

FIFA Momentum Tracker
Python, Scikit-learn, OpenCV, ML

January 2025 – March 2025

- Built a ML model using Python and scikit-learn achieving 82% accuracy in momentum prediction and 20% win rate improvement
- Automated decision system using PyAutoGUI and statistical algorithms reducing false positives to <2% while maintaining 75% confidence thresholds
- Implemented computer vision pipeline with OpenCV for real-time data analysis processing 8 quantitative features at sub-second latency

TECHNICAL SKILLS

Languages: Python, MATLAB, TypeScript

DevOps & Tools: Excel, Financial Modeling, Capital Markets Analysis, Plotly, Tableau
